EBIKELOCK

Electronic lock for central control of individual bike spaces.

It is ideal for use on our CBR4SC bike racks within cages and end of journey facilities.

A proximity card is issued to the cyclist to allow access to the parking area and / or the individual bicycle parking space. Upon the cyclist arriving to the area and scanning their card, the magnetic lock will release and gravity will make the cable fall away from the security rail.

The cyclist simply takes the cable and wraps it around the bike frame and wheel and inserts the magnetic striker at the end of the cable into the lock and it engages automatically. When the cyclist returns, upon scanning their proximity card, the magnetic lock disengages releasing their bike.

The system can be linked to the site's security or can stand alone which allows property managers to charge for the bicycle space.

CBRLOCK

Cable Lock on Racks and Rails

Perfect for casual or event parking such as cafes, restaurants, wineries and alike. Visiting cyclists do not have to carry a lock to your location. Once a cyclist's bicycle is secured, they can relax and stay longer.

To use the cable lock, a cyclist would place the cable around their bicycle frame and wheel and lock the bike. Once locked, the key can be removed. When the cyclist returns, they insert the key and unlock their bike. The key is captured in the lock for the next user.
