

The Leda Advantage

Leda maintains an absolute commitment to quality and has developed special manufacturing methods and equipment to ensure consistent high quality for all its products.

The Leda Advantage

- Innovative products
- Stylish contemporary designs
- High vandal resistance
- Reliable and low maintenance
- Cost efficient
- Superior installation methods
- Unparalleled technical advice with product choice and specification

Quality

Leda works continually to improve the effectiveness and efficiency of all its products.

When selecting or specifying from within this catalogue, it is advisable to consult directly with Leda to ensure that specifications have not been altered. Leda can also advise on the suitability of your Securabike selection for the proposed application.

Service

Every Leda client is also guaranteed of unrivalled service, advice and technical support.

Products are distributed and supported through branch offices or distributors in all major capital cities in Australasia, Europe, North America, the Middle East and South East Asia. Trained staff are available to supply sales and technical advice on all Leda products.

Materials

Clean smooth lines and an ageless finish make Securabike bicycle parking products the choice of architects and local government agencies throughout Australia, Asia and North America. They are available in either galvanised mild steel or stainless steel.

Galvanised Mild Steel

Tough and durable galvanised steel pipe is normally used in the manufacture of bicycle rails and racks. Bicycle cages and lockers are assembled using quality

corrosion-resistant materials and components.

Leda utilise their own powder coating plant to ensure a consistent, high quality finish to all of its products. All components are thoroughly cleaned, alkaline de-greased and chromate rinsed prior to being epoxy primed.

A coating of 75 to 100 microns of polyester powder is applied electrostatically and oven-cured to produce a hard, durable finish. Two pack polyurethane finishes can also be accommodated if specified.

Stainless Steel

Securabike stainless steel products are normally supplied in Grade 304 (Schedule 10) although Grade 316 is available on request.

Stainless steel provides an attractive, durable, low maintenance and corrosive-resistant product.

Leda have developed a comprehensive 'care and maintenance' instruction booklet for all their stainless steel products which is available free upon request, or it can be downloaded from the Leda website.

Stainless steel products are normally polished to a level 4 finished finish, however, higher levels up to mirror finish are available to specification.

All product is protectively packaged to ensure arrival on site in pristine condition.
